

Cook County Plywood

By gluing a number of thin veneers or plies of softwood or hardwood, the first engineered lumber was created: Plywood. The specific type of glue and veneer determine the suitability of a sheet of plywood and its particular application. Each sheet of plywood is graded for exterior or interior use. Plywood is used in everything from construction to furniture. This is because Plywood has great strength, low cost, and stability. Plywood is commonly used as a base under flooring or carpeting because it remains flat and gives a smooth, uniform surface that will not split or crack. Plywood is also useful for wall paneling because it helps protect against wind, earthquakes, and the settling of a house, while also providing thermal protection. There are many uses to Plywood, making this piece of lumber a great choice! Cook County Lumber is proud to supply Plywood from Roseburg, Murphy, and Hoquim.

Superply

Species: Doug Fir & Import Birch Mix
Sizes: 4x8 - 3/8", 1/2", 5/8", 3/4"
Grade: AC

Underlayment

Species: Doug Fir, Southern Yellow Pine
Sizes: 4x8 - 3/8", 1/2", 5/8", 3/4", 1-1/8"
Surfacing: Square-Edge, Tongue & Groove, Scant Face, Full Face

CDX Sheathing

Species: Doug Fir, Southern Yellow Pine
Sizes: 4x8 - 3/8", 1/2", 5/8", 3/4"
Ply: 4, 5

Siding

Species: Doug Fir
Sizes: 4x8 - 3/8"
Grade: Rough Sawn
Surfacing: 18 Patch

BBOES (Concrete Form)

Species: Doug Fir
Sizes: 4 x 8 - 3/4"
Surfacing: Oil & Edge Sealed
Ply: 7
