

Cook County Cedar

Cedar Lumber is a great choice for decking, siding, paneling, or any house project. Cedar has a natural resistance to moisture, decay, and insect intrusion. With unmistakable dimensional stability, cedar lumber lays flat and straight. These boards retain fasteners and are sure to stay firm and solid throughout the life of your house. With a cellular structure that creates interior air spaces, cedar provides great insulation, better than most woods and higher than brick or concrete. This creates a cooler house in summer, warmer in winter, and helps absorb sound. Although cedar provides a great base for stains and paint, cedar is naturally a beautiful wood. With fine grain and texture and warm tones, light amber to deep honey, cedar makes a durable and beautiful choice.
